In the Claims:

Please amend the claims as follows:

1. (currently amended) A method for distribution of a package containing at least one media object by an electronic device, the package further comprising information indicative of the conditions in which the distribution of the package is allowed, ~~wherein before the package is distributed by the electronic device an examination is performed to examine~~comprising:

verifying the integrity of the information indicative of the conditions in which the distribution of the package is allowed, and if the verification of the integrity of the package fails, prohibiting the distribution of the package;

if said verifying does not fail, examining said information indicative of the conditions in which the distribution of the package is allowed to determine whether the distribution of the package is allowed~~or not~~; and

if said examining determines that distribution of the package is allowed, distributing said package.

2. (cancelled)

3. (original) The method according to claim 1, wherein said package is distributed to another electronic device.

4. (original) The method according to claim 1, wherein said information indicative of the conditions in which the distribution of the package is allowed and the at least one media object are stored in the same file.

5. (original) The method according to claim 1, wherein said information indicative of the conditions in which the distribution of the package is allowed and the at least one media object are stored in different files.

6. (original) The method according to claim 1, wherein said information indicative of the conditions in which the distribution of the package is allowed is protected by a digital signature.

7. (original) The method according to claim 1, wherein a software is executed in the electronic device for controlling the handling of the package, and the modification of the package is prevented by said software.

8. (currently amended) The method according to claim 3 comprising ~~at least the steps of~~:
- storing at least one package into a memory of the electronic device,
- selecting a package from the memory for distribution to the other electronic device,
- verifying the integrity of the package,
- examining said information indicative of conditions in which the distribution of the package is allowed or is not allowed to determine if the package can be transmitted or not, and
- on the basis of said examining either transmitting the selected package to the other electronic device, if it is determined that the transmission is allowed, or not transmitting the selected package to the other electronic device, if it is determined that the transmission is not allowed.

9. (original) The method according to claim 3, said information indicative of conditions in which the distribution of the package is allowed or is not allowed comprising at least one detail of the other electronic device, wherein the electronic device communicating with the other device exchanges information on said at least one detail of the other device for determining whether the distribution is allowed or not.

10. (original) The method according to claim 1, said information indicative of conditions in which the distribution of the package is allowed or is not allowed comprising information about the cost of the package and the payment method.

11. (currently amended) A system for distributing a package containing at least one media object by an electronic device, the package further comprising information indicative of the conditions in which the distribution of the package is allowed, and comprising:

a controller configured for verifying the integrity of the information indicative of the conditions in which the distribution of the package is allowed, and if the verifying of the integrity of the package fails, for prohibiting the distribution of the package; the system comprising means controller configured for examining the information indicative of the conditions in which the distribution of the package is allowed to determine whether the distribution of the package is allowed or not, if said verifying does not fail; and means

a transmitter for distributing the package by the electronic device if it is determined that the distribution of the package is allowed.

12. (cancelled)

13. (currently amended) The system according to claim 11 comprising means, wherein the transmitter is for distributing said package from the electronic device to another electronic device.

14. (original) The system according to claim 11, wherein said information indicative of the conditions in which the distribution of the package is allowed and the at least one media object are stored in the same file.

15. (original) The system according to claim 11, wherein said information indicative of the conditions in which the distribution of the package is allowed and the at least one media object are stored in different files.

16. (currently amended) The system according to claim 13 comprising:

- a memory in the electronic device for storing at least one package,

- means the controller in the electronic device for selecting a package from the memory for distribution to the other electronic device,

- means the controller in the electronic device for verifying the integrity of the package,

- means the controller in the electronic device for examining said information indicative of conditions in which the distribution of the package is allowed or is not allowed to determine if the package can be transmitted or not,

- means the transmitter in the electronic device for transmitting the selected package to the other electronic device, if it is determined that the transmission is allowed, and

- means a receiver in the other electronic device for receiving the selected package from the electronic device.

17. (currently amended) The system according to claim 13, said information indicative of conditions in which the distribution of the package is allowed or is not allowed comprising at least one detail of the other electronic device, wherein the system further comprising a transmitter and a receiver in the electronic device and a transmitter and a receiver in the other electronic device for exchanging information on said at least one detail of the other electronic device for determining in the electronic device whether the distribution is allowed or not.

18. (original) The system according to claim 11, wherein said information indicative of conditions in which the distribution of the package is allowed or is not allowed comprises information about the cost of the package and the payment method.

19. (currently amended) An electronic device comprising means for distributing a package containing at least one media object, the package further comprising information indicative of the conditions in which the distribution of the package is allowed, and comprising:

a controller configured for verifying the integrity of the information indicative of the conditions in which the distribution of the package is allowed, and if the verifying of the integrity of the package fails, for prohibiting the distribution of the package;

the electronic device comprising means controller configured for examining the information indicative of the conditions in which the distribution of the package is allowed to determine whether the distribution of the package is allowed or not, if said verifying does not fail; and

means a transmitter for distributing the package if it is determined that the distribution of the package is allowed.

20. (cancelled)

21. (currently amended) The electronic device according to claim 2019, wherein in the package said information indicative of the conditions in which the distribution of the

package is allowed is protected by a digital signature calculated on the basis of information of the package, wherein the ~~means~~controller configured for verifying the integrity of the package ~~comprise means~~is configured for calculating a digital signature on the basis of information of the package and for comparing said digital signature of the package with said calculated digital signature to verify the integrity of the package.

22. (original) The electronic device according to claim 19, wherein said information indicative of the conditions in which the distribution of the package is allowed and the at least one media object are stored in the same file.

23. (original) The electronic device according to claim 19, wherein said information indicative of the conditions in which the distribution of the package is allowed and the at least one media object are stored in different files.

24. (currently amended) The electronic device according to claim 19, ~~comprising means~~wherein the controller is configured for preventing modifying the package.

25. (currently amended) The electronic device according to claim 19 comprising:
- a memory for storing at least one package,
- ~~means~~the controller for selecting a package from the memory for distribution to another electronic device,
- ~~means~~the controller for verifying the integrity of the package,
- ~~means~~the controller for examining said information indicative of conditions in which the distribution of the package is allowed or is not allowed to determine if the package can be transmitted or not, and
- ~~means~~the transmitter for transmitting the selected package to the other electronic device, if it is determined that the transmission is allowed.

26. (currently amended) The electronic device according to claim 25, said ~~means for selecting a package comprising means~~controller configured for indicating to a user of the electronic device information on packages for which distribution is allowed.

27. (currently amended) The electronic device according to claim 19, said information indicative of conditions in which the distribution of the package is allowed or is not allowed comprising at least one detail of another electronic device, wherein the electronic device further ~~comprising a transmitter and~~comprises a receiver and wherein the transmitter and the receiver are configured for exchanging information on said at least one detail of the other electronic device for determining in the electronic device whether the distribution is allowed or not.

28. (currently amended) The electronic device according to claim 19, wherein said information indicative of conditions in which the distribution of the package is allowed or is not allowed comprises information about the cost of the package and the payment method, wherein the electronic device comprises ~~means~~a user interface for indicating information on the cost and payment method to a user of the electronic device.

29. (currently amended) A mobile communication device ~~comprising means~~for distributing a package containing at least one media object, the package further comprising information indicative of the conditions in which the distribution of the package is allowed~~, and~~ comprising:

a controller configured for verifying the integrity of the information indicative of the conditions in which the distribution of the package is allowed, and if the verifying of the integrity of the package fails, for prohibiting the distribution of the package;

the ~~mobile communication device comprises means~~controller configured for examining the information indicative of the conditions in which the distribution of the package is allowed to determine whether the distribution of the package is allowed~~or not,~~ if said verifying does not fail; and

~~means~~a transmitter for distributing the package if it is determined that the distribution of the package is allowed.

30. (cancelled)

31. (currently amended) A computer ~~program product comprising~~readable medium, stored with machine executable ~~steps~~instructions for distributing a package containing at least one media object by an electronic device, the package further comprising information indicative of the conditions in which the distribution of the package is allowed, said machine executable instructions for verifying the integrity of the information indicative of the conditions in which the distribution of the package is allowed, and if the verification of the integrity of the package fails, prohibiting the distribution of the package; ~~wherein the computer program product further comprises machine executable steps~~

if said verifying does not fail, for examining, ~~before the package is distributed by the electronic device,~~ said information indicative of the conditions in which the distribution of the package is allowed to determine whether the distribution of the package is allowed; ~~or not,~~ and ~~the computer program product comprising machine executable steps~~

for distributing the package by the ~~first~~ electronic device, if it is determined that the distribution of the package is allowed.

32. (currently amended) The computer ~~program product~~readable medium according to claim ~~25~~31, further comprising machine executable ~~steps~~instructions for:
-       storing at least one package into a memory of the electronic device,
-       selecting a package from the memory for distribution to the other electronic device,
-       verifying the integrity of the package,
-       examining information indicative of conditions in which the distribution of the package is allowed or is not allowed to determine if the package can be transmitted or not, and

- on the basis of said examining either transmitting the selected package to the other electronic device, if it is determined that the transmission is allowed, or not transmitting the selected package to the other electronic device, if it is determined that the transmission is not allowed.

33. (currently amended) A package ~~containing~~comprising:

at least one media object to be distributed by an electronic device, the package further comprising information indicative of the conditions in which the distribution of the package is allowed, wherein before the package is distributed from the electronic device said information indicative of the conditions in which the distribution of the package is allowed is verified with respect to the integrity of the information indicative of the conditions in which the distribution of the package is allowed, and if the verification of the integrity of the package fails, prohibiting the distribution of the package;

if said verifying does not fail, examining said information ~~is examined~~ to determine whether the distribution of the package is allowed ~~or not~~; and

if it is determined that the distribution of the package is allowed, the package distribution is started.

34. (original) The package according to claim 33, wherein said information indicative of the conditions in which the distribution of the package is allowed is protected by a digital signature.

35. (original) The package according to claim 33, wherein said information indicative of the conditions in which the distribution of the package is allowed and the at least one media object are stored in the same file.

36. (original) The package according to claim 33, wherein said information indicative of the conditions in which the distribution of the package and the at least one media object are stored in different files.

37. (original) The package according to claim 33, wherein the package comprises a digital signature formed on the basis of said information indicative of the conditions in which the distribution of the package is allowed and the at least one media object.

38. (original) The package according to claim 33, wherein it is a Java archive.

39. (original) The package according to claim 33 comprising a Java Archive and Application Descriptor.

40. (currently amended) The package according to claim 2733, wherein said information indicative of conditions in which the distribution of the package is allowed or is not allowed comprisingcomprises at least one of the following:
- date,
- time of day,
- identity of the electronic device,
- identity of the other electronic device,
- manufacturer of the electronic device,
- manufacturer of the other electronic device,
- model or version of the electronic device,
- model or version of the other electronic device,
- manufacturer of the package,
- user subscription information
- at least one other detail of the other electronic device.

41. (currently amended) A business method for distributing a package containing at least one media object to an electronic device, the method comprising including information indicative of the conditions in which the distribution of the package is allowed; wherein the

11

method for distributing said package further comprises:

verifying the integrity of the information indicative of the conditions in which the distribution of the package is allowed, and if the verification of the integrity of the package fails, prohibiting the distribution of the package, if said verifying does not fail;

examining said information indicative of the conditions in which the distribution of the package is allowed to determine whether the distribution of the package is allowed; and

if said examining determines that distribution of the package is allowed, distributing said package.

42. (cancelled)

43. (currently amended) The business method according to claim 41, said information indicative of conditions in which the distribution of the package is allowed or is not allowed comprising information about the cost of the package and the payment method, wherein the business method further comprising steps ofcomprises:

- informing a user of the electronic device on the cost and payment method, and performing the payment of the cost of the package.

44. (new) An electronic device for distributing a package containing at least one media object, the package further comprising information indicative of the conditions in which the distribution of the package is allowed, comprising:

means for verifying the integrity of the information indicative of the conditions in which the distribution of the package is allowed, and if the verifying of the integrity of the package fails, for prohibiting the distribution of the package;

means for examining the information indicative of the conditions in which the distribution of the package is allowed to determine whether the distribution of the package is allowed if said verifying does not fail; and

means for distributing the package if it is determined that the distribution of the package is allowed.
